PROFESSIONAL SUMMARY

Senior Full Stack Engineer with over 15+ years of experience designing and delivering scalable enterprise applications across asset management, healthcare, IoT, and industrial domains. Expert in building cloud-native solutions using ASP.NET Core, React, Python and Azure, with strong experience in architecture, secure API design, AI integrations and legacy modernization.

Proven track record of leading end-to-end system development from architecture and design to deployment and production support across distributed teams and long-term consulting engagements.

CORE TECHNICAL SKILLS

Primary Skills

C#, ASP.NET Core, ASP.NET MVC, React, RESTful Web APIs

Secondary Skills

Python, Fast API, RAG, LLM integrations, Vector DB, AI Integrations, IoT, RFID systems

Databases

SQL Server, MySQL

Cloud & DevOps

Microsoft Azure, Azure App Services, Azure DevOps, CI/CD Pipelines

Architecture & Practices

Microservices, Secure API Design, Authentication & Authorization (JWT), Performance Optimization, Agile Process

Tools

Git, Visual Studio, Jira

PROFESSIONAL EXPERIENCE

Independent Consultant | May 2022 – till date

Nexora — AI Powered Intelligent Automation, Redefined

- Built an AI integrated full-stack industrial automation platform using **React, C#, ASP.Net Core, Python and Fast API** for real-time equipment monitoring and predictive maintenance.
- Designed and integrated machine learning pipelines using **XGBoost** and **LSTM** models for predictive maintenance, enabling real-time failure prediction and anomaly detection, and improving detection accuracy by 30%.
- Developed an AI powered **RAG-based root cause analysis** system over equipment manuals to generate explainable diagnostics and maintenance insights.
- Engineered scalable real-time IoT data pipelines using **MQTT** to ingest, process, and store high-frequency sensor telemetry, enabling anomaly detection, predictive forecasting, and operational insights.
- Implemented proactive maintenance alerts, operational dashboards, and Remaining Useful Life (RUL) prediction workflows.
- Deployed solutions on Azure App Service with automated **CI/CD pipelines** using **GitHub Actions**.

Product Life cycle Management system

- Designed and developed an **AI powered Product Life cycle Management** full-stack application using **ASP.NET Core, React, Web API and SQL Server**
- Integrated AI& ML for automated task generation and scheduling, risk identification and mitigation, Project forecasting, workflow optimization
- Contributed to system architecture and backend design for scalable applications
- Involved in Code reviews. Sprint planning, backlog grooming.

Technical Lead | Tech Mahindra | Sep 2021 – April 2022

Built a Greenfield Healthcare & Integration Platform from Scratch:

- Architected and delivered a full-stack healthcare ecosystem utilizing **ASP.NET MVC, C#, Web API, and SQL Server**.
- Engineered custom middleware services from the ground up to parse JSON payloads across disparate third-party enterprise systems.
- Implemented high-performance back-end services using ASP.NET Web API, integrating third-party APIs for lab orders, e-prescribing, and patient billing.
- Designed the underlying SQL Server database infrastructure, utilizing stored procedures, views, and index tuning to maintain high-speed access to patient medical records under heavy concurrent traffic.
- Enforced strict HIPAA compliance across all software tiers by implementing role-based access control (RBAC), audit trail mechanisms, and data encryption protocols.

Technical Architect | Nixsol (client-Infosys) | April 2021 – Sep 2021

- Designed and developed the application architecture and APIs for a Health care asset management system using **C#.net, MVC, ASP.Net, Web API, SQL, Visual Studio, TFS, Agile**
- Successfully implemented key enhancements to the existing ASP.NET web application, improving its functionality.
- Worked on database enhancements and query optimization, Implemented Unit testing modules using Moq framework.

Independent Consultant | eSuntech Canada Inc (Remote) | 2017 – 2020

- Developed WinForms and Web based applications for energy monitoring, supply chain/ warehouse management solutions.
- Worked on hands-on development using **C#.net, WPF, ASP.Net, Web API, IOT**
- Modernized legacy applications to improve maintainability and system stability
- Owned backend modules from design through production support
- Coordinated remotely with client teams to deliver agreed milestones

Senior Software Engineer | AssetSense (formerly Stagirus Technologies) | 2007 – 2016

- Built enterprise-grade web applications for plant automation and asset condition monitoring platforms
- Developed Web applications and web services using **C#, ASP.Net MVC and SQL Server**
- Supported full software lifecycle including development, testing, release, and maintenance
- Collaborated with cross-functional teams to deliver long-running production systems

EDUCATION

- **Bachelor of Engineering** – Institution of Engineers
- **PG Diploma in Computer Applications**

DOMAIN EXPERIENCE

Energy & Utilities • Asset Tracking • Plant Maintenance • Healthcare Systems • Supply Chain
• IoT Platforms
